## 1 The package customenvs-pictos

### 1.1 Ideas

The idea is to display some pictograms like. Each pictogram can be inserted inline with automatic height (with or without depth), or with a manual height.

The code determines (total)height and, if necessary, depth of letters in the current font, in order to position the pictogram correctly:

- height is given by height of `AZERTYUIOPSDFGHKLWXCVBN` in the current font (`strut` can change it);
- total height and depth are given by total height and depth of `azerty...UIOPQSDFGHJKLWXCVBN` in the current font (`dstrut` can change it).

### 1.2 Loading

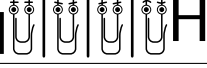

The package loads within the preamble, with `\usepackage{customenvs-tikzpictos}`.

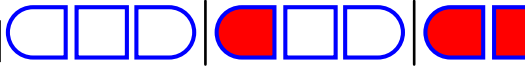

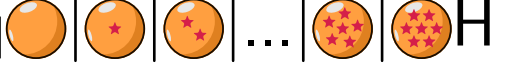

If `customenvs` is loaded, it load itself `customenvs-tikzpictos`

The only loaded packages are `simplekv`, `calc`, `simplekv`, `listofitems`, `xstring`, `xintexpr` and `tikz` (with `shapes.geometric` / `bbox` libraries).

```
\usepackage{customenvs-tikzpictos}
```
